WAYGROUND formerly Quizizz Worksheets

Name

**Software Development Quiz**

Total questions: 30

Worksheet time: 15mins

Instructor name: Mr. Jason Walker

Class

Date

1. What is a software development lifecycle (SDLC)?

   a) A technique for managing databases.

   b) A process that defines the stages of software development from initial planning to maintenance.

   c) A set of rules for writing code.

   d) A tool used for debugging software.

2. Which of the following is a key feature of Agile methodology?

   a) Regular collaboration with stakeholders and iterative development.

   b) Fixed and unchangeable project scope.

   c) No communication between team members during the project.

   d) Completing the entire project in a single phase.

3. What is version control?

   a) A debugging technique.

   b) A testing strategy.

   c) A method for gathering project requirements.

   d) A method to keep track of different versions of software code.

4. Which language is considered a high-level programming language?

   a) Python

   b) Binary

   c) Machine code

   d) Assembly language

5. What is the purpose of unit testing?

   a) To ensure that the software is secure.
   b) To test individual components or pieces of code for correctness.
   c) To monitor the performance of an application.
   d) To test the whole application at once.

6. Which of the following is NOT a benefit of using Agile methodology?

   a) Completing the project in strict sequential phases.
   b) Regular stakeholder feedback.
   c) Continuous delivery of working software.
   d) Flexibility in responding to changes.

7. What is a compiler in software development?

   a) A software that translates high-level code into machine code.
   b) A method of testing code performance.
   c) A tool used to manage project requirements.
   d) A tool that helps format the code for readability.

8. In object-oriented programming, what is a class?

   a) A blueprint for creating objects with predefined properties and methods.
   b) A type of function that manipulates data.
   c) A type of database.
   d) A module for storing code libraries.

9. Which of these is a common use of Application Programming Interfaces (APIs)?

   a) To create user interfaces.
   b) To design databases.
   c) To translate programming languages.
   d) To access data from external services or applications.

10. What is a key characteristic of functional programming?

    a) Code is organised around functions without changing state or data.
    b) It focuses on object creation.
    c) It is based on machine-level code.
    d) Use of mutable variables and states.

11. What is the first step in debugging a software issue?

a) Change random parts of the code to see if the error disappears.
b) Release the software without fixing the issue.
c) Rewrite the entire codebase.
d) Understand the problem by replicating the issue.

12. Which of these tools is used for version control?

a) Git
b) Visual Studio
c) Eclipse
d) Jenkins

13. When working in a team, what is the best way to manage code changes?

a) Only one team member should make all changes.
b) Use a version control system and conduct regular code reviews.
c) Allow each team member to directly change the code without reviewing.
d) No need for code management in teams.

14. What is the key advantage of using an Integrated Development Environment (IDE)?

a) It converts high-level code to machine code.
b) It automatically writes all the code for you.
c) It allows developers to surf the internet while coding.
d) It provides a single interface for coding, debugging, and testing.

15. Which of the following tasks is part of a software development technician's role?

a) Designing marketing campaigns.
b) Managing payroll systems.
c) Installing hardware components.
d) Writing and testing code based on user requirements.

16. Why is continuous learning important for a software development technician?

a) To avoid working with a team.
b) To keep up with new tools, technologies, and practices in the field.
c) To focus only on existing skills without learning new ones.
d) To ensure they don't have to work long hours.

17. What is a key behavioural trait when working in a software development team?

a) Working alone without consulting teammates.
b) Ignoring project deadlines.
c) Avoiding communication with clients or stakeholders.
d) Demonstrating a strong work ethic and respecting others' opinions.

18. How should a software development technician respond to changing project requirements?

a) Adapt positively to the changes and work with the team to implement them.
b) Avoid discussing the changes with stakeholders.
c) Cancel the project.
d) Refuse to make changes because it will delay the project.

19. Which of the following behaviours shows professionalism in software development?

a) Writing code without testing.
b) Refusing to learn new programming languages.
c) Ignoring feedback and working without any documentation.
d) Meeting deadlines and communicating effectively with the team.

20. Why is it important to follow ethical guidelines when developing software?

a) To make development quicker and cheaper.
b) To reduce the amount of code written.
c) To avoid making software that users don't like.
d) To ensure software is safe, secure, and respects user privacy.

21. What is the purpose of continuous integration (CI) in software development?

a) To test software after the final product is released.
b) To continuously write new code without any testing.
c) To merge all code changes into a shared repository frequently to detect issues early.
d) To integrate marketing strategies into development.

22. Which tool is often used to automate continuous integration (CI) processes?

a) WordPress
b) Microsoft Word
c) Jenkins
d) Slack

23. How should a developer handle an error message that occurs during software execution?

a) Write additional code to bypass the error.
b) Analyse the error message to identify the root cause and correct the code.
c) Ignore the error and hope it doesn't happen again.
d) Restart the computer to resolve the issue.

24. What does DRY stand for in software development best practices?

a) Data Refinement Yield.
b) Debugging Results Yield.
c) Don't Repeat Yourself.
d) Develop Responsive Yields.

25. What is refactoring in software development?

a) Adding new features to the software.
b) Removing unnecessary code to improve software performance.
c) Rewriting code from scratch.
d) Restructuring existing code without changing its external behaviour.

26. Why is feedback from end-users important in software development?

a) To ensure the software meets user needs and improves usability.
b) To adjust marketing strategies.
c) To decide on future project deadlines.
d) To control the development team's progress.

27. When working in a team, how can you demonstrate adaptability?

a) By following the initial plan without considering any changes.
b) By embracing change and working collaboratively to implement new ideas.
c) By refusing to adjust to new project requirements.
d) By only focusing on your own tasks and avoiding team discussions.

28. What is a responsible action to take if a software project falls behind schedule?

a) Hide the delay from your manager and team.
b) Quit the project to avoid responsibility.
c) Blame another team member for the delay.
d) Communicate the delay openly and work with the team to find a solution.

29. How can a software development technician show professionalism in their daily work?

a) By communicating effectively, managing time well, and adhering to deadlines.
b) By only focusing on writing code without testing.
c) By refusing to help teammates.
d) By frequently missing deadlines and ignoring feedback.

30. Why is testing software important before deployment?

a) To reduce the amount of code that needs to be written.
b) To skip the quality assurance process.
c) To ensure the software functions correctly and is free of bugs before release.
d) To save time on development.
